Linguistics is the scientific study of language, examining it both as an abstract system and in its psychological and social contexts. Linguistics focuses on how the human mind structures, processes, and acquires language and on how language use is an integral part of human interaction. With the central role played by language in the social world, linguistics is situated at the intellectual intersection of the humanities and the sciences, including the social, biological, and behavioral sciences. Accordingly, students receive broad training that cuts across and breaks down traditional boundaries between disciplines.
